

15. Digit Splitter

Condition:

Given a five-digit number M (where ABCDE are its digits in the decimal number system), print its digits, each on a separate line, starting with the ten-thousandths.

Input:

- A five-digit number.

Output:

- His five digits, each on a new line.

Examples:

| Input | Output |
|-------|-----------------------|
| 12567 | 1 2 5 6 7 |
| 55668 | 5 5 6 6 8 |
| 77755 | 7 7 7 5 5 |
