

04. Count Words in a Sentence

Condition:

Write a program that takes a sentence (string) and returns the number of words in the sentence. The words are separated by one or more blank spaces.

Input:

- A string (sentence).

Output:

- An integer representing the number of words in the sentence

Limitations:

The string can contain letters, numbers, and other symbols.

Examples:

Input	Output
"Hello world"	2
"Count the words here"	4
"This is a test"	4
