

## 02. Leap Year Check

### Condition:

Write a program that takes a year and returns whether the year is a leap year.

### Input:

- A year (integer).

### Output:

- **True** if the year is a leap year.
- **False** if the year is not a leap year.

### Constraints:

The year is a positive number.

### Examples:

Input	Output
2020	True
1900	False
2019	False
2024	True
