

09. Pangram Checker

Condition:

Write a program that, given English text entered from the keyboard, checks whether it is a pangram. A pangram is a sentence that uses all the letters of the alphabet at least once.

Input:

- String of characters representing the sentence is entered on one line.

Output:

- It returns "True" if the sentence is a pangram and "False" if the sentence is not a pangram.

Examples:

Input	Output
Hello world	False
Pack my box with five dozen liquor jugs	True
The five boxing wizards jump quickly	True
