

08. Simple Interest

Condition:

Write a program that calculates simple interest on given principal, interest rate, and time (in years).

Input:

- Three numbers: principal amount (**P**), annual interest rate (**R**), and time in years (**T**).

Output:

- A number representing simple interest.

Formula:

$$SI = (P * R * T) / 100$$

Examples:

Input	Output
1000 5 2	100.0
1500 4.3 6	387.0
2000 3 1	60.0
