

07. Convert Celsius to Fahrenheit

Condition:

Write a program that accepts a temperature in degrees Celsius and converts it to degrees Fahrenheit.

Input:

- An integer representing the temperature in degrees Celsius.

Output:

- A number representing temperature in degrees Fahrenheit.

Formula:

$$F = C * 9/5 + 32$$

Examples:

Input	Output
0	32.0
100	212.0
37	98.6
