

15. Build Toy Cars

Condition:

You work in a toy shop that mainly makes cars, and your task is to assemble cars from a collection of parts. Each car requires 4 tires, 1 car body, and 2 people to fit inside. The total number of tires, car bodies, and people available is given. How many complete toy cars can you make?

Input:

- The number of tires, the number of hulls, and the number of human figures are entered on one line, all separated by commas.

Output:

- One line displays the number of cars that can be produced with the given parts.

Examples:

Input	Output
2 , 48 , 76	0
43 , 15 , 87	10
