13. Excel Column Number

Condition:

Given a column heading as it appears in an Excel spreadsheet, return the corresponding column number.

The number is calculated as follows:

A -> 1

B -> 2

C -> 3

...

Z -> 26

AA -> 27

AB -> 28

...

Input:

- Character string `s`, representing the title of a column in an Excel spreadsheet. The title can be composed of one or more uppercase English letters.

Output:

- An integer that is the corresponding column number in Excel for the given heading.

Examples:

Input	Output
"A"	1

"AB"	28
